wine & cheese

PEARLS

CLINICAL & PRACTICE MANAGEMENT TIPS

Dr. ZINA ALKAFAJI
THE RESURGENCE OF SDF

Silver Diamine Fluoride has been around for decades and is now making a comeback in North America. Topics include history, mechanism of action, and practical applications in pediatric and geriatric patients alike.

Dr. ALI BEHMARD
SYSTEMATICS APPROACH TO
PATIENT CENTRED CARE

**PENNY
HATZIMANOLAKIS**
MECHANICAL MANAGEMENT OF
BIOFILM; ARE WE AT A
TIPPING POINT?

The underworld of subgingival biofilm can be a formidable environment for clinicians. Traditionally, the battle against biofilm communities thriving subgingivally has been fought with a blend of hand and power-driven instruments. In the last few years in North America and for over 10 years in Europe, indications for the use of air-pressured mechanical biofilm disruption technology with the use of low abrasive-based powders for both supragingival and subgingival biofilm has been developed. This evidence-informed review will explore the air-flow mechanism and its clinical application for biofilm management.

Dr. KENDALL JAMES
BALANCE THE FINE LINE
OF OCCLUSION

Occlusion is more than just the position of tooth contact, it is also the timing and the force of which are teeth contact. How can we use objective digital technology to look at our patients occlusion and identify early problems?

PEARLS

CLINICAL & PRACTICE MANAGEMENT TIPS

Dr. JORDAN MILLAR

**HOW 3D TECHNOLOGY IS MOVING
ORTHODONTICS FORWARD**

From scanners and 3D printers to digital setups and robot formed wires, dentistry and orthodontics are part of the 3D technological boom.

I have been able to accurately streamline our records process (digital radiographs, iTero scanner), maintain a dry lab using our 3D printer (Form2), offer aligner therapy to most patients (Invisalign), and provide CAD/CAM digital lingual retainers as needed (Memotain). Learn how we are embracing 3D technology in our office.

Dr. REZA GHANNADAN

PHYSIOTHERAPY MANAGEMENT OF TMD

To review management principles of TMD from a physiotherapy perspective

I have been able to accurately streamline our records process (digital radiographs, iTero scanner), maintain a dry lab using our 3D printer (Form2), offer aligner therapy to most patients (Invisalign), and provide CAD/CAM digital lingual retainers as needed (Memotain). Learn how we are embracing 3D technology in our office.
